

IN THE SPECIFICATION

Please replace the following paragraphs:

Page 2, paragraph [0003].

[0003] Many information handling systems include heat sink retention frames in order to secure heat sinks to ~~parts~~ components of the system that ~~need cooling~~ generate heat, typically processors. These frames are limited for use on different processing platforms for a number of reasons. Due to their set widths and lengths, the size of the heat sink base that can be used on the platform is restricted. This can result in the use of less than optimal heat sinks, and in turn, less than optimal thermal dissipation.
